Are multiple use, having been designed, conceived and placed on the market with the objective of completing, throughout their life cycle, a minimum number of journeys or rotations based on refilling or multiple use for the same purpose for which they were originally conceived. The suitability of packaging for multiple use is corroborated by chemical tests (migration tests) carried out periodically in a specialised laboratory accredited in accordance with the standard NP EN ISO/IEC 17025. The suitability for multiple use is also duly certified by physical and mechanical tests, carried out in accordance with the requirements of Standard UNE 53928 (reusable plastic tableware for food use), which attest the packaging ability to withstand 10 washing cycles in a dishwasher.

This document was issued in English, given that this is the standard language that we use for foreign entities and to issue these kinds of documents. We believe that given that there is not any primacy with any other European language, the use of English language must be accepted.
